PROFESSIONAL SUMMARY

Full-stack developer specializing in **Vue/Nuxt, Node.js, headless CMS architecture, and AI-powered internal tooling**, with nearly three years designing, shipping, and owning production systems at scale. Architected a content platform serving millions of monthly visitors, built an email delivery system reaching 100K+ daily subscribers, designed a customer database with a cross-channel analytics platform spanning 8 international offices, and shipped AI tools — including an OCR receipt-processing pipeline — that eliminated manual data entry across teams. Comfortable owning projects end-to-end, from database design and API architecture to responsive frontends and CMS integrations.

PROFESSIONAL EXPERIENCE

Software Developer • Full-Stack

2023 – Present

Creation Ministries International — Atlanta, GA (remote, globally distributed team)

- Architect and maintain **Creation.com** on Nuxt/Vue.js and Directus CMS, serving **millions of monthly visitors** with optimized performance, responsive design, and a scalable headless content architecture.
- Designed the organization's **customer database (CRM)** on Directus — 26 collections managing contacts, subscriber lists, and digital-content access across **8 international offices** — replacing a legacy dual-write system as the sole system of record.
- Architected a **cross-channel analytics hub** syncing sales, email, and social metrics from 7 e-commerce stores and 5 marketing channels into unified, permission-scoped dashboards used by leadership across offices.
- Designed and built a full-stack **email delivery platform** supporting **100K+ daily subscribers**, integrating Nuxt frontend forms, Directus backend workflows, GetResponse, and dynamic MJML + Liquid.js templating.
- Led development of internal web applications — including a tour booking system and conference registration platform — **reducing manual administrative processing by 60%**.
- Created a reusable **page-block and content rendering system** backed by Directus, enabling rapid landing-page development and empowering non-technical staff to manage site content independently.
- Built **AI-powered internal tools** — including an OCR receipt-processing platform that digitizes speaker travel expenses for review, correction, and export to Excel or the customer database — eliminating manual data entry.
- Implemented automation across the organization with Google Apps Script, CMS workflows, and AI/MCP services — including teleprompter scripting for the production team and streamlined administrative workflows for the events team.
- Maintain **Cloudflare-backed infrastructure** for security, asset delivery, and site reliability; author internal documentation in Slab to support cross-team knowledge sharing.
- Collaborate daily with designers, marketing, events, and executive leadership across a globally distributed organization to deliver projects on schedule.

KEY PROJECTS

Analytics Hub & Customer Database — *Cross-channel analytics inside a custom CRM*

- Designed a Directus-based customer database serving as the system of record for contacts, subscriptions, and digital-content access across 8 international offices, in collaboration with a senior developer.
- Architected a pluggable adapter system syncing metrics from 5 channels — PrestaShop (7 international stores, each in local currency), GetResponse (17 mailing lists), YouTube, Facebook, and Instagram — with nightly automated syncs and on-demand backfills.
- Built Vue 3 + ApexCharts dashboards with cross-channel KPIs, period-over-period deltas, and per-channel deep dives, secured by office-scoped row-level access policies.

WARP — **Creation.com Redesign** — *Full redesign and migration to a modern stack*

- Migrated a legacy site to Nuxt 3 + Directus, improving page-load performance and enabling a fully headless CMS architecture.
- Built a modular page-block system allowing the editorial team to compose and publish pages without developer involvement.

- Preserved SEO rankings and uptime continuity throughout the migration for a site with millions of monthly visitors.

Email Delivery Platform — *End-to-end transactional and marketing email system*

- Built a full-stack platform supporting 100K+ daily sends, integrating GetResponse, MJML templating, and Liquid.js for dynamic personalization.
- Designed Directus backend workflows to manage subscriber lists, send schedules, and delivery logs.

AI Receipt Processing Tool — *AI OCR pipeline for travel-expense intake*

- Built a scanning platform where returning speakers upload trip receipts, an AI OCR pipeline extracts line-item data, and staff review and correct results in a simple editing UI.
- Added one-click export to Excel or directly into the Directus customer database, replacing fully manual expense transcription; applied the same AI-tooling pattern to accelerate processes across other departments.

Internal Operations Tooling — *Tour booking & conference registration systems*

- Scoped, designed, and shipped two internal web applications replacing manual spreadsheet-based workflows.
- Reduced administrative overhead by 60%, freeing significant staff time each week across events and logistics teams.

SKILLS

Languages	JavaScript, TypeScript, Python, SQL, C, PHP
Frontend	Vue.js, Nuxt, React, React Native, HTML, CSS, Tailwind, Bootstrap, Bulma, NuxtUI, MJML, ApexCharts
Backend	Node.js, Express, MongoDB, MySQL, SQLite, Supabase
AI Tooling	AI OCR pipelines, LLM API integration, MCP servers/tooling, AI-assisted workflow automation
Tools & Platforms	Git/GitHub, Directus CMS, Docker, Cloudflare, GetResponse, Meta Graph API, YouTube Data API, GraphQL, Apollo, PrestaShop, Figma, Insomnia, Google Apps Script
Concepts	RESTful APIs, Headless CMS, MVC Architecture, State Management, OOP, Responsive Design

EDUCATION & CERTIFICATIONS

Full-Stack Development Certificate	— Georgia Institute of Technology	2023
B.S., Computer Engineering	— University of West Georgia	In progress

ADDITIONAL

- Strong written and verbal communicator; experienced writing technical documentation for non-technical stakeholders.
- Leadership experience managing teams of 20+ in volunteer and ministry contexts.
- Self-directed across multiple concurrent projects in fully remote, asynchronous environments.
